

# Osurnia®

(florfenicol • terbinafine • betamethasone acetate)

- Osurnia is a long acting antibiotic and mild pain medication that has been applied to your pets ear or ears today to treat an infection. Please do not clean the ears or apply any additional medication until otherwise directed.
- Please schedule a technician appointment for 1 week from today for a re-application of Osurnia. This visit will be complementary. There will be a charge for the medication and an ear cleaning if needed. If the technician feels that the ears have not improved, and that you should be seen by a doctor a recheck fee will be applied.
- A recheck appointment is highly recommended 1 month after the second application with a doctor to ensure that the infection is completely gone. There will be a recheck fee for this visit.

(Ear infections are very likely to return after treatment if the ears have not been fully medicated and monitored).

If you have any questions please call the office: 610-277-8387
